

Self-Care Assessment

The following self-care assessment scale is by Saakvitne and Pearlman from the Traumatic Stress Institute. It is designed as a tool to measure how well you are addressing your own needs. It is useful to revisit this assessment regularly.

Rate the following areas in frequency:

5=frequently, 4=occasionally, 3=rarely, 2=never, and 1=it never occurred to me.

WHAT IS MY SCORE AND WHAT DOES IT MEAN?

In this section, you will score your test so you understand the interpretation for you. To find your score on each section, total the questions listed on the left and then find your score in the table on the right of the section.

Compassion Satisfaction Scale

Copy your rating on each of these questions on to this table and add them up. When you have added them up you can find your score on the table to the right.

22 or less	43 or less	Low
Between 23 and 41	Around 50	Average
42 or more	57 or more	High

Burnout Scale

On the burnout scale you will need to take an extra step. Starred items are "reverse scored." If you scored the item 1, write a 5 beside it. The reason we ask you to reverse the scores is because scientifically the measure works better when these questions are asked in a positive way though they can tell us more about their negative form. For example, question 1. "I am happy" tells us more about

- *1. _____ = _____
- *4. _____ = _____
- 8. _____
- 10. _____
- *15. _____ = _____
- *17. _____ = _____
